

# How To Instructions

## Paper Lanterns

Is it tricky? No not really... Each only takes a few minutes. Give yourself a bit of time before the big day to put them together so you don't have to rush hanging them at the last minute.

### Four Simple Steps!

You will be surprised by just how easy it is!

1. Gently expand the paper ball with the small metal rings at the top.
2. Take the metal expander frame, and with the hook at the top, feed it through the largest opening of the lantern.
3. Expand the paper lantern over the insert carefully to avoid breaking the paper.
4. Bending the wire frame into a curve slightly helps to ease the frame in and hold the shape. A bit like a spring.

#### How do I hang the lantern?

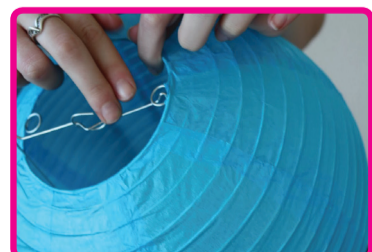

Generally we find the best way to hang the lantern is with a piece of ribbon or string. You can even use fishing line if you don't want the string to be noticeable. You can use the short and long pieces of string to adjust the height of each lantern.

#### Can I re use them?

Of Course! Simply slide the metal frame out of the centre and condense the paper ball back to its original shape. Be sure to store the lanterns flat so they don't become misshapen.

#### Do I need any other bits and pieces to use this item?

You will need to choose your own string or ribbon for hanging of the lantern. And of course if you choose to use lights or LED's you will need to purchase these separately.

#### PF staff rating \*\*\*\*\*

These are brilliant for so many events – weddings, parties, baby showers, bridal showers, everything! They are so easy to set up and can be used over and over.
